

Features

Locating

- Maintains a log of user location where the highest signal strength was observed for every device
- *Lock Feature* gathers readings and delivers a calculated GPS coordinate for the target
- *Signal Strength Indicator* provides device direction, even without GPS signal
- *Distance and Direction Indicator* guides the user to the calculated coordinate of the target
- *Notes Feature* records user comments for devices and individual location readings
- *Hide LOB Feature* allows users to exclude inferior readings from the coordinate calculation

Settings & Statistics

- Investigations are organized by case and can be password protected
- *Status Panel* continually displays battery remaining, Capture Mode and GPS status
- *Status Screen* denotes user GPS coordinate, storage space available and much more
- *Show MAC Vendor Feature* displays MAC Addresses with the manufacturer name decoded
- *Use Feet Instead of Meters Feature* displays measurements according to user preference
- Fan, backlight and sound are user controlled

Targeting

- *Device List Screen* shows all Wi-Fi devices detected
- *Sort Function* reorganizes the *Device List* by user-selected data elements, such as MAC Address
- *Alert Function* color code devices based on detailed, user-defined conditions
- *Filter Function* narrows the *Device List* to only devices matching detailed, user-defined conditions
- *Tag Feature* uses colors to group devices into categories, such as suspects or friends
- *Quick BSSID Filter Feature* instantly lists all Clients connected to a selected Access Point
- *Stat Screen* provides packet count per SSID, revealing the targets' broadcast list
- *Capture Mode Feature* allows users to gather data communicated by all, none or selected devices

Reporting

- Formatted reporting viewable on a PC
- One click download of investigation logs and captured data
- *KML Report Feature* plots all or selected devices using Google Earth
